Subject: Voluntary Disclosure: Exports of Smoke Detectors

Dear Ms. Doane:

Pursuant to 10 CFR § 127.12, Honeywell International Inc. ("Honeywell") would like to voluntarily disclose certain inadvertent export violations relating to smoke detectors. Honeywell also is filing its annual reports of smoke detector exports as Attachment B to this filing.

CIRCUMSTANCES AND NATURE OF VIOLATIONS

Honeywell's System Sensor business unit ("System Sensor"), located at 3825 Ohio Avenue, St. Charles, Illinois, manufactures and sells ionization smoke detectors under the authority of a valid distribution license (#12-15023-02E). Ionization smoke detectors can be found in homes and businesses worldwide and can be purchased at retail stores throughout the world. These detectors contain tiny quantities of Americium-241 as their sensing element, although the amount of radioactivity emanating from a typical detector (less than one micro-curie) is virtually undetectable. Nonetheless, because they contain Americium, under current federal regulations, ionization smoke detectors are controlled for export by the NRC.

In 2004, Honeywell Automation & Control Solutions (System Sensor's parent division) made a major commitment to enhancing export compliance throughout the business. ACS hired a dedicated export compliance manager and began a review of its product lines for purposes of export classification. As part of this review, in November 2004, it was discovered that System Sensor's ionization smoke detectors contain Americium-241 and that certain inadvertent export violations had occurred with respect to these products. System Sensor has sold its ion smoke detectors both domestically and internationally. Because of the very low radiation level associated with these detectors, nearly all of System Sensor's exports of these products have qualified for the NRC general license identified in 10 CFR 110.23 (a)(2). However, as discussed below, some of Honeywell's exports have not fully complied with the NRC general license.

1. *Exports to India, Pakistan and Israel*

10 CFR Part 110 provides that Americium-241 may be exported to restricted destinations under a general license only if (a) the substance is contained in "industrial process control equipment or petroleum exploration equipment" and (b) the amount of Americium does not exceed 20 curies per shipment and 200 curies¹ per year. Although System Sensor has exported only a tiny fraction of the allowable curie

¹ The annual curie ceiling would be reduced to 100 curies per year under a proposed rule.

levels, System Sensor smoke detectors may not qualify as “industrial process control equipment”² and thus may require an export license when exported to a “restricted” destination.

As identified in Attachment A, System Sensor made 36 shipments of smoke detectors to restricted destinations (32 to India, 3 to Pakistan and 1 to Israel). Twenty-eight of these shipments went to Honeywell subsidiaries or affiliate entities: 23 shipments to *Honeywell International India* (located in Gurgaon, Haryana); 4 shipments to *Honeywell Tata Limited* (in Tal Haveli, Pune); and 1 shipment to *Honeywell India Software*. In addition, it has made 3 shipments to *Ezzi Engineering* (in Karachi, Pakistan); 2 shipments to *Prashanth Yelakyathanahalli* (in Bangalore); 1 shipment to *BCD Buyout Stores* (located in Tal Haveli, Pune), 1 shipment to the *National Center for Astrophysics* (Pune University) and 1 shipment to the United Nations Development Program (Jerusalem, Israel).

A total quantity of 2,290 smoke detectors have been exported to India, Pakistan and Israel. The total quantity of Americium contained in these detectors, if aggregated, would amount to no more than .00125 curies. Details on these shipments are provided in Attachment A.

2. *Ministerial Error in Shipping Documentation.*

Except for the 35 exports identified above, all other exports of smoke detectors have been authorized by the NRC general license in 10 CFR 110.23(a)(2). The NRC regulations recommend as a best practice (although they do not mandate) that exporters cite the relevant regulation somewhere on their shipping documents.³ System Sensor has not followed this best practice when exporting ionization smoke detectors. Instead, it identified these products as commercial products classified as EAR99.

3. *Annual Report*

Under 10 CFR 110.23(b), an exporter is required to provide an annual report of its Americium shipments in January of each year. Together with this disclosure, we are submitting as Attachment B our annual report for 2004, as well as our late reports for the calendar years 2002 and 2003.

CORRECTIVE ACTION

Honeywell System Sensor took immediate corrective action when the violation was discovered, including steps that have strengthened the site’s overall export compliance procedures. Upon discovering the violation in November 2004, System Sensor implemented a hold on all exports of ionization smoke detector products to India, Pakistan, Israel and other restricted countries. System Sensor currently is developing a procedure to flag exports of smoke detectors so that (1) no exports will occur in violation of the NRC general license and (2) Honeywell ACS’s Radiological Operations Program Manager, Gary Caines, is fully apprised of any shipments of smoke detectors containing Americium. Additionally, System Sensor is reforming its shipping documentation to conform with suggested best practices.

² As stated in Honeywell’s Comment #7 to the Proposed Rule on Export and Import of Nuclear Equipment and Radioactive Material (69 Fed. Reg. 55785), Honeywell believes that 20 CFR Part 110 should be amended to exempt smoke detectors from export licensing and reporting requirements, just as industrial process control and petroleum exploration equipment currently are exempted.

³ 10 CFR 110.20(e) states that, “A person who uses an NRC general license as the authority to export or import may cite on the shipping documents the section of this part which authorizes the described export or import under general license, as a means of expediting U.S. Customs Service’s processing of the shipment.”

Additionally, Honeywell ACS has begun to implement training about NRC export controls into its existing export compliance training curriculum. In December 2004, Karl Laskas, the Honeywell ACS export compliance manager, conducted training for its Asia-Pacific businesses (including Honeywell Indian subsidiaries affected by the ban on exports to India, Pakistan and Israel) regarding NRC export controls. In that same month, Mr. Laskas collaborated with Dave Barry, the Honeywell ACS Europe trade compliance manager, in developing a training curriculum for European sites that addresses NRC export controls. Mr. Laskas also will address NRC export controls at Honeywell's annual export compliance training conference scheduled for March 2005.

MITIGATING FACTORS

Under criteria identified in the applicable NRC enforcement guidelines, Honeywell believes that the above-mentioned violations should be resolved without penalty.

This violation was wholly inadvertent. Prior to November 2004, System Sensor failed to recognize that these products (which are readily available for purchase both within the US and abroad) were controlled for export. As part of its compliance program, System Sensor retained the services of a former NRC Commissioner to assist it in understanding and observing NRC regulations; unfortunately this advisor also missed this compliance responsibility.

Since discovering that its ionization smoke detectors are controlled, Honeywell ACS has implemented a corrective action program and moved to restore compliance with NRC export regulations, including annual reporting and observance of best practices in shipping documentation.

The export of smoke detectors has no deleterious effect on public safety. To the contrary, the export of smoke detectors is a positive benefit in protecting consumers, businesses and government installations (including many US persons, companies and other entities) from the threat of fire. The control of Americium is frequently associated with averting the threat of radiological weapons (so-called "dirty bombs"), but the radioactive material contained in System Sensor smoke detectors simply *is not suitable for use in constructing a radiological weapon* and *is not in a form that is readily dispersible*. The overall radioactivity of a System Sensor smoke detector is very low — no more than one micro-curie — and far below the radioactivity thresholds that NRC subjects to special controls in Part 110. Indeed, if the total quantity of ionization smoke detectors exported to India, Pakistan and Israel somehow were aggregated, that entire volume would amount to only 1/10,000 of the total permissible curie level for a *single shipment* of Americium. Thus, System Sensor's exports posed neither any actual nor potential safety consequences.

CONCLUSION

Honeywell is fully committed to compliance with NRC export regulations, and is taking action to ensure that the violations identified above do not recur. We ask that this disclosure be resolved without penalties, as is appropriate under NRC enforcement guidelines.

Thank you for your assistance in this matter. If you require additional information, feel free to contact the undersigned at 202-662-2681.

Sincerely,

A handwritten signature in black ink, appearing to read 'Karl M. Laskas', written in a cursive style.

Karl M. Laskas
